Prospective Master's graduate in Computer Science aspires to fuel innovation and drive a positive impact. Strong communication skills, analytical skills, problem-solving skills and proactive detail-oriented approach have aided my success in every endeavor. I bring proficiency in machine learning (AI/ML), neural networks, deep learning and data structures, along with business acumen and adherence to AGILE methodology.

TECHNICAL KNOWLEDGE & SKILLS

Programming Languages: Python, C, JavaScript, RegEx, SQL

Tech & Tools: Pandas, NumPy, Matplotlib, Scikit-learn, TensorFlow, Keras, Librosa, PyTorch, Asyncio, SpaCy, Git, Shell, Jupyter Notebooks, Anaconda, Tableau, Seaborn, Docker, NLTK, Flask

TECHNICAL EXPERIENCE & PROJECTS

Student & Teacher's Assistant – Woolf University, [Qwasar Campus](#)

03/2023 – Current

- **Conducted peer reviews** for projects in C and Python based on pre-defined criteria, **testing and evaluating performance, code modularity and clearness**. Providing constructive feedback to students to aid in their learning process. Completed over 120 exercises and 40 projects.
- Supported program managers by resolving tickets, researching documentation, setting up and troubleshooting software environments. Explained concepts such as: data cleaning, data engineering, predictive models, natural language processing (NLP), and data visualization.

Wine Recommendation | **Stack:** Pandas, selenium, asyncio, scikit, nltk, seaborn, SQLite, bs4 [GitHub](#)

- **Scraped 1,000 pages** from Wine Enthusiast to create an SQL database that features 12 criterion including region, grape variety and wine type, producer, rating, and description.
- **Tokenized descriptions** in unigrams and bigrams to find common notes for each variety and type, later used to create a comprehensive wine search tool. Resolved data inconsistencies.
- The search tool has 4 components: **17 meal-pairing categories, filter by 7 criterion, Q-rating to find best value for money** (similar to Statistics z-score) and **notes search**. Top 20 common notes for selected varieties are displayed to help user grasp palette of filtered wine types.

Loan Acceptance Prediction | **Stack:** Pandas, Scikit-learn, Matplotlib, RF Classifier

[GitHub](#)

- Implemented a **Random Forrest Classifier model to predict loan acceptance** based on various criteria of a complex dataset of 5,000 entries. Trend analysis explores patterns among those who accepted personal loans and those who declined, creating a portrait of the audience.
- The model shows top features influencing decision-making. Each feature is analyzed to display what values of the criterion impact the result (e.g., income, age, CC avg, securities). **Achieved precision of 99.33% and recall of 94%** on the test set of 1,500 entries.

- Engineered a model using a convolutional neural network that **classified 1,000 audio files (*.wav) by genres**. Generated over 50 features including mfcc, chroma, mel, contrast and tonnetz to maximize precision including mean and square root average. In total, dataset included 11,000 entries. **The model has 5 layers and reaches F1-score of 93%.**

Fraud Detection Model | **Stack:** Pandas, Scikit-learn, imblearn, SMOTE, RF Classifier [in progress](#)

- **Engineered a fraud detection model, overcoming an imbalance on large dataset** where frauds constituted only 0.172% of transactions or 492 out of 283,807 transactions. Accuracy measured using the Area Under the Precision-Recall Curve (AUPRC) currently stands at 87% (93% macro).

Atari Games – 3 Distinct models that solve 3 different Atari Games **in progress**

- **Developed 3 distinct Deep Q-Network models** capable of playing Cart Pole, Space Invaders, and Pacman Atari games. Utilized OpenAI's Gym for training, leveraging reinforcement learning techniques. The algorithm was trained on 49 Atari games.

ADDITIONAL EXPERIENCE

Restaurant Manager – La Cubana Ossington, Toronto, ON 06/2022 – 12/2022

- Managed the company's biggest location on the 13-th coolest street in the world with annual revenue of \$1,000,000. Consistently hit labour and food cost marks of 28-32%, while **reaching 9% of net profit** by adding new streams of revenue and cost-efficient solutions.
- **Developed a plan to boost sales** and ensure customer satisfaction: revising the menu to attract later crowd and boost liquor sales, utilizing the back room for service, adding mulled wine & hot apple cider, converting the back storage into a bar among others.
- **Led a team of 15-20 staff members**, fostering supportive interpersonal relationships inside the team. Revised tip-out process for consistency in distribution. Implemented new hiring procedures, resulting in a greater quality of candidates. Designed operational improvements.

Staff Accountant – Schwartz CPA, Maple, ON 01/2021 – 05/2022

- Reviewed and analyzed client data and accurately prepared GST/HST and income tax returns for corporations with revenue up to \$2 million. Built and distributed **financial reporting for corporations ranging between \$10,000 to \$2,000,000** in revenue, including IT sector.
- Prepared and submitted rent and wage subsidy applications, **generating over \$250,000 in subsidies for our clients**. Processed payroll for 10 different companies, including companies with over \$40,000 in payroll monthly. Proficient in Office: Excel, PowerPoint and Word.

EDUCATION

Woolf University, Qwasar Campus – Master's Degree in Computer Science (AI/ML)	2024
Fanshawe College – Bachelor of Commerce in Accounting (in progress)	2022
Humber College – Advanced Diploma in Sport Management	2017

CERTIFICATIONS

Cocktail Design • WSET Level 1 • Smart Serve • CPR/AED • Toastmasters' Club President
